Underfloor Heating & Cooling

If you are buying or building the house of your dreams, don't you owe it to yourself to install the best heating system available?

the right choice

Why should I have Underfloor heating?

Underfloor heating is the most comfortable and efficient way to heat a house and offers many benefits over more conventional methods of heat distribution.

The real question is why fit any other type of heating system?

What is Underfloor heating?

Underfloor heating works by circulating warm water through a network of cross-linked polyethylene pipes laid in the floors, gently spreading heat through the house.

With traditional radiators, temperature variations can occur due to uneven radiator coverage. Not so with underfloor heating, as the pipe network covers the entire floor area for even heat distribution throughout.

Underfloor heating systems are available to suit different floor types, suspended wooden floors and screeded floors.

Comfort, safety, efficient, design, freedom and virtually maintenance free are all benefits of underfloor heating.

all about you

Comfort

Underfloor heating creates a feeling of well being, as it gently and evenly warms the home environment.

Modern control systems enable underfloor heating to provide just the right amount of heat, at the right time and in the right place, controlled by individual room thermostats. The system is designed to run at a much more constant level than other heating methods.

Flexibility

Radiators take up valuable room space, which imposes design considerations and difficulties when cleaning, painting or wallpapering rooms. With underfloor heating, there is the freedom of room layout.

With no radiators or visible pipework, you can use the whole room and place furniture wherever you want.

Choices for flooring are wider too, anything that conducts heat well from stone and tiles, to wood and vinyl. Hard floor finishes becoming more comfortable, as well as long lasting.

Energy Efficient

Installing an energy efficient heating system can save you money. The low water temperature circulating in the floor system, and the distribution of heat where you need it, this combined will save you money on your fuel bills.

The system is almost maintenance free, with the pipes having an expected life

of over 100 years, tough and robust, they are corrosion-free and resistant to scale build-up.

Also there are no radiators to buy, mend or paint, thereby saving you even more money.

Safety and Health Benefits

Underfloor heating means warm and dry floors, which inhibit the growth of house dust mites, a benefit to asthma and allergy sufferers. With gentle heat radiating passively from the floor, draughts are all but eliminated, meaning lower dust levels in the house.

It also benefits from no hot, hard edged radiators for young and old to injure themselves.

With a proven track record and experience accrued over 25 years of manufacturing underfloor heating systems, you can trust the expertise of REHAU.

the best-kept secret

Why REHAU?

With a proven track record and experience accrued over 25 years of manufacturing Underfloor heating systems, you can trust the expertise of REHAU, like no other player in their field.

At REHAU, we consider customer satisfaction to be of paramount importance.

System installation is carried out by REHAU Authorised Partners, with on-site technical support available at all times from experienced REHAU engineers, to ensure your project is completed quickly and effectively.

The Next Step

Turn the dream into reality by visiting rehauhome.com, finding your local REHAU Authorised Partner and learn more about underfloor heating.

The best way to heat your home.
